

## **To the owners of property in areas where sewerage system work is being carried out**

The Sewerage Board of Limassol - Amathus is carrying out construction work in various areas for the expansion of the Sewerage System.

Because certain connection contractors are asking property owners to construct their own sewer before work on laying the main pipeline in the street is completed, we wish to inform the public that such action is illegal and may cause legal or technical problems for property owners, as well as additional cost.

We stress that, at this stage, the Board does not require the construction of a private sewer and its connection to the public sewerage system, even if work on laying the sewer pipe in the street has finished.

When the sewerage system becomes functional, the relevant directive will be published in the Official Gazette of the Republic and those affected will be informed of the need to construct a private sewer and of the start of the process to submit applications to the SBLA for the connection of private systems to the public sewerage system.

Finally, we wish to stress that connection to the public sewer or any intervention made without permission of the Board to the public sewerage system is a criminal offence, punishable with a fine and/or other legal measures.

For more information on connecting to the system, visit the Board's website at [www.sbla.com.cy](http://www.sbla.com.cy) or call **25881888**.
